Innovative China :

decoding territorial, socio-economic and technological challenges

https://innov-china2018.sciencesconf.org/

In China territorial development policies are linked to industrial policies elaborated by the Central Government, and to its ambitious strategy to promote innovation. China which used to be the factory of the world is evolving towards a model of advanced economy driven by a long term public commitment to research, innovation and higher education.

In a rather short period of time compared with Western economies, China is facing and overcoming demographic, environmental and urban challenges, with innovative approaches, through technological and economic exchange open, but controlled, with the rest of the world.

May 31st, 2018
09.00-18.00

Hôtel de l'Industrie
4, Place Saint-Germain-des-Près
Paris 6ème

Registration online
before May 23rd
Livestreamed

This conference will decipher these changes which are still difficult to measure and explore opportunities that are arising to European actors.
